

amyloid precursor protein metabolic process

T cell cytokine production

astral microtubule organization

endothelial cell proliferation potassium channel regulator activity

L27 domain binding

cortical microtubule organization

myelin sheath abaxonal region

mitotic cell cycle checkpoint

regulation of ventricular cardiac muscle cell action potential

regulation of protein localization to synapse

membrane raft organization

cellular protein-containing complex localization

cortical actin cytoskeleton organization

smooth muscle tissue development

intercalated disc

hard palate development

establishment or maintenance of cell polarity

embryonic skeletal system morphogenesis

establishment of centrosome localization

reproductive structure development

lens development in camera-type eye lateral plasma membrane

regulation of membrane potential

branching involved in ureteric bud morphogenesis

regulation of potassium ion export across plasma membrane

phosphoprotein phosphatase activity

regulation of myelination
