

G protein-coupled receptor signaling pathway

regulation of GTPase activity

vesicle fusion
integrin-mediated signaling pathway

reactive oxygen species metabolic process

Rac guanyl-nucleotide exchange factor activity

epidermal growth factor receptor binding

Fc-gamma receptor signaling pathway involved in phagocytosis

regulation of cell size

metal ion binding
neutrophil chemotaxis

platelet activation

positive regulation of cell adhesion

guanyl-nucleotide exchange factor activity

small GTPase mediated signal transduction

phosphotyrosine residue binding

angiogenesis
